Study Title

Significance of reporting ABO serology post ABOi HSCT engraftment

Study Description

To test the clinical significance of re-emergence, post 30 days HSCT engraftment, of ABO isoagglutinins against:

- the patient ABO in minor ABOi Tx
- the HSCT ABO donor in major ABOi Tx

To make a recommendation on reporting any change in ABO serologic evaluation in the forward and reverse ABO typing post HSCT

in guiding clinician to diagnosis or treatment of either possible relapse or GVHD or aplasia
