Study Title

Emergency Blood Products

Study Description

To ensure that the non-conventional emergency blood products have an acceptable level of quality and safety and that they can be produced in a standardized and sustainable way, it is essential to understand their properties and qualities. In this study we aim to summarize the current knowledge on non-conventional emergency blood products and harmonize the definitions of these products. Further we want to characterize and provide guidance on collection, production, validation, quality control and storage and discuss under which circumstances they can be useful and effective in emergency management.
